

NOW YOUR ECOMMERCE PLATFORM ACCOUNT CAN CONNECT TO QUICKBOOKS®

With WGiTs for QB, you can automatically transfer transactions from your ecommerce platform into QuickBooks.

What is WGiTs for QB?

WGiTs for QB is a software that uses your ecommerce platform's API to pull data directly from your ecommerce platform account into your QuickBooks desktop application. No more manually downloading reports or using Transaction Pro Importer (TPI) each time you want to upload your transactions.

QuickBooks is a registered trademark of Intuit Inc.
 Transaction Pro Importer is the property of Baystate Consulting, LLC.

Stress Free Order Management

- WGiTs for QB is set up once and then every night, week, or month (your choice) it automatically uploads all new orders.
- Orders that have issues are sent back to you in a report so you can research and make corrections when you have time.
- WGiTs for QB has SKU Assist synchronization that will automatically check that SKUs are matching in both systems.
- WGiTs for QB does not rely on your ecommerce platform's reports. Now, any updates pushed from your ecommerce platform won't affect your ability to transfer orders to QuickBooks.

We've Got You Covered

- No hassle setup: WineGlass Marketing handles the complete set up and guarantees it will work before we say "it's ready".
- WGiTs for QB comes with phone, email, and chat support by WineGlass Marketing experts during our business hours.
- We service the software to ensure it is up-to-date and working with your ecommerce platform.

WGiTs for QB Will Save You Money

TPI requires you to manually run and download reports, fix errors on the spot, and then upload them to QuickBooks. This can take between 2-8 hours a month! WGiTs for QB does all this behind the scenes to free up your bookkeeper or accounting team. WGiTs for QB is offered at a low cost, predictable, monthly fee with no hidden costs for support.
